**Who this guide is for**

We get a lot of people asking for screening trees for privacy, shade, windbreaks, hedge-screens, partitioning screens, and other functions.

But, usually it’s to hide; nosey neighbours, new housing developments, a busy road, a new pylon, inconsiderately constructed garages, unattractive dormer windows, people that don’t know how to use curtains, nude sunbathers etc...

So to those asking, we say:

≡ we have the tree for you! ≡

**Choose Grafton Nursery**

*Grafton Nursery is the home of Hardy Eucalyptus.*

We are an award winning, specialist nursery with over 35 years of practical horticulture and research experience, and we’ve got 20 medals to prove it.

**We grow over 60 species** of Eucalyptus from seed at our UK nursery, and we ship to customers all over Europe.

**Among other things, we have:**
- written several guides and a book about growing Eucalyptus,
- been hired to give lectures,
- been featured in magazine articles,
- been filmed for the RHS Chelsea Flower Show 2018.

So you know you’re buying from the best.

Hilary - CEO, author and top quality grower
How to use this guide

- grab a pen and answer the following questions
- pick your tree based on your results
- find your tree at hardy-eucalyptus.com

Things to do first

This guide is quite detailed to help you choose your Eucalyptus species based on your wishes and environmental conditions.

It would be helpful if you had to hand:
- seasonal temperatures (especially below 0°C)
- soil type, and pH if particularly acidic/alkaline
- distance to the coast if nearby (hopefully you’d know that!)
- the fully grown height and number of trees you will need

Things to remember

Trees are like people. They like food, lots of water and sunlight. They have different personalities and grow to different shapes & sizes. They are good at different jobs and some thrive in environments where others won’t do so well.

They’re easy to grow, but like with all living beings, you’ll kill it if you get it wrong.

Please read this guide carefully to make sure you are picking the right tree for the job you need it to do, and make sure it’s suited to your environment.

We love our trees like they’re our children (some even have names!), please look after our babies well when they are in their new home 💚

Need extra help or advice? Send us an email, call, or go online

@HardyEucalyptus  Hardy Eucalyptus
Start here!

This section is about your **ground conditions**. Keep a note of your answers, options are highlighted in yellow.

Use your answers to help you choose from the grid towards the end.

1. **How hardy does your tree need to be?**
   - How cold does your garden become in an average winter?
     - I can have half-hardy plants; H3 minimum of -5°C
     - I get average winters; H4 between -5°C and -10°C
     - I get cold winters; H5 between -10°C and -15°C
     - I get very cold winters; H6 between -15°C and -20°C
     - My plants have to be very hardy; H7 colder than -20°C

2. **What’s your exposure like?**
   - What part of the country are you in?
     - I’m right on the coast
     - I’m land-locked and fairly sheltered
     - I’m inland but exposed to fast and cold winds

And will your new tree...
- enjoy lots of open **sun**
- be in part or full **shade**

Keep going there’s more!

---

07515 261 511  office@hardy-eucalyptus.com  www.hardy-eucalyptus.com  
@HardyEucalyptus  Hardy Eucalyptus
How thick?

Would you like your screen to be dense or more open?
- Slightly open as a light screen
- Quite dense ... I don’t like my neighbours

Great! That’s the environment sorted.
Now please pick your screen type...

How will you prune yours?

You can keep them short or let them grow:
- Short and bushy less than 2m tall
- A loose screen about 2 - 2.5m tall
- A pruned standard with foliage at 2 - 5m
- A medium height tree 5 - 10m tall
- A tall tree 10m or more

Describe your soil.

If you were to dig a hole:
- It’s dry, stony and free draining
- Just normal soil; drains well, doesn’t lie wet in the winter
- Heavy and wet in the winter but cracks open in the summer
Now pick your screen type

This is an explanation of our pruning terminology.

Make a note of which **screen type** does the job for you.

Compare your preferred type with the table later on to check which tree species is suitable to be pruned to that height

### Shorter screen types:

**Shrub**

A shrub is happy pruned to 1-2m tall, not a lot of Eucalyptus like being this short, but this shape does make an excellent low screen

**Hedge-screen**

A hedge-screen is a loose, billowy screen, trees are happy kept pruned at 2-2.5m, good for obscuring views at eye-level

**Lollipop**

We also call this a shrub-on-a-stick! Trees are happy when pruned 2-5m tall, lightly prune regularly to keep the shape, good for screening above a fence. *E. gregsoniana* and *E. neglecta* will lose lower branches over time. The other species might remain bushy down to the ground, but this can be pruned.
Taller types:

Multi-stems either grow naturally with several base shoots, or can be encouraged through coppicing (cut right back to the ground!). They produce a wide dense canopy, and shouldn’t be allowed to reach over 10m tall to prevent strain on the main stems.

Screening trees are excellent for obscuring above fences and also make great specimen trees for your garden and cast light shade.

This is Bruce. Bruce is about 6ft tall. He likes warm toast, and dislikes the serious decline of the British horticultural industry.

E. subcrenulata
Well done, you’ve finished! A+. 5/5 for you. Please proceed...

How to read your results

Hopefully you kept a note of your answers from above!

The following pages have two grids:

- first, choose your tree based on your ground conditions
This should give you a handful of trees to choose from.
...hey! why not buy more than one type of tree for a mixed hedge?
- then find these trees on the screen type grid to see if they are suitable for your preferred pruning style.

Keep reading to the end!
There’s helpful planting and pruning tips, and a present for you!
don’t skip to the last page, that’s cheating...!

Feeling stuck? Send us an email, call, or go online.
Choose your trees

Use the grid to help you pick the best tree for your garden.

These are our favourite species

not that we’re really allowed to have favourites...

First, choose your tree based on your **ground conditions**:

<table>
<thead>
<tr>
<th>Botanical name</th>
<th>Common name</th>
<th>Hardiness down to</th>
<th>Exposure*</th>
<th>Soil*</th>
</tr>
</thead>
<tbody>
<tr>
<td><em>E. archeri</em></td>
<td>Alpine Cider Gum</td>
<td>H3 to H5 -15°C</td>
<td>Sheltered to slightly exposed</td>
<td>All soils</td>
</tr>
<tr>
<td>*E. 'Azura'</td>
<td>Azura Cider Gum</td>
<td>H3 to H5/6 -16-18°C</td>
<td>Sheltered to slightly exposed</td>
<td>All soils</td>
</tr>
<tr>
<td><em>E. cordata subsp. quadrangulosa</em></td>
<td>Heart Leaved Gum</td>
<td>H3 to H4 -8 to -10°C</td>
<td>All conditions good for coast</td>
<td>Wet</td>
</tr>
<tr>
<td><em>E. 'France Bleu'</em></td>
<td>French Blue Cider Gum</td>
<td>H3 to H4 -8 to -10°C</td>
<td>Sheltered</td>
<td>All soils</td>
</tr>
<tr>
<td><em>E. gregsoniana</em></td>
<td>Wolgan Snow Gum</td>
<td>H3 to H4/5 -8 to -14°C</td>
<td>Sheltered</td>
<td>Normal to dry</td>
</tr>
<tr>
<td><em>E. kybeanensis</em></td>
<td>Kybean Mallee Ash</td>
<td>H3 to H5/6 -14 to -16°C</td>
<td>Sheltered to slightly exposed</td>
<td>Normal to dry</td>
</tr>
<tr>
<td><em>E. neglecta</em></td>
<td>Omeo Gum</td>
<td>H3 to H5/6 -14-18°C</td>
<td>Sheltered to slightly exposed</td>
<td>All soils</td>
</tr>
<tr>
<td><em>E. nicholii</em></td>
<td>Black Peppermint</td>
<td>H3 to H5 -14-15°C</td>
<td>Sheltered</td>
<td>Normal to dry</td>
</tr>
<tr>
<td><em>E. parvula</em></td>
<td>Small Leaved Kybean Gum</td>
<td>H3 to H5/6 -14-18°C</td>
<td>Sheltered to slightly exposed</td>
<td>All soils</td>
</tr>
<tr>
<td><em>E. pauciflora subsp. niphophila 'Mount Bogong'</em></td>
<td>Dwarf Alpine Snow Gum</td>
<td>H3 to H5/6 -16-18°C</td>
<td>All conditions good for coast</td>
<td>Normal to dry</td>
</tr>
<tr>
<td><em>E. subcrenulata</em></td>
<td>Tasmaniana Alpine Yellow Gum</td>
<td>H3 to H5/6 -15 to -16°C</td>
<td>Sheltered to slightly exposed</td>
<td>Normal to wet</td>
</tr>
<tr>
<td><em>E. urnigera</em></td>
<td>The Urn Gum</td>
<td>H3 to H5/6 -15 to -16°C</td>
<td>Sheltered to slightly exposed</td>
<td>All soils</td>
</tr>
</tbody>
</table>

* All of our Eucalyptus prefer full sun and open sky but *E. neglecta* will tolerate part shade
+ ‘Snow gums’ can not tolerate very wet/waterlogged soil in winter
Now narrow down the best tree for your screen type:
- See the **pruning section** below for a description of screen types

<table>
<thead>
<tr>
<th>Botanical name</th>
<th>1-2m</th>
<th>2-2.5m</th>
<th>2-5m</th>
<th>5-10m</th>
<th>10-15m</th>

What’s all this about pruning?

Not all Eucalyptus grow into giants!
We grow over 60 species of Eucs that range in maximum growth height from 3m to 30+m tall

However...

Your tree will benefit from pruning
If not pruned, many of these trees will grow to their maximum height, just like Hornbeam, Beech or Conifer hedges would.

Also, pruning helps to shape your screen, encourages thick new growth, and helps to control root spread.

But I’m not very handy with loppers...
If you don’t want to prune your tree, visit our website www.hardy-eucalyptus.com for more information how tall your tree might grow.

How will you prune yours?
Compare your chosen shape with the table above to check which tree species is suitable to be pruned to that height
How many trees do I need?  

We want you to buy all of the trees!

But if we have to be serious, for a healthy screen we recommend:

**Hedge screens:**
- Short screens = 1.5m spacing between the tree trunks
- Taller screens = up to 2.4m spacing between the tree trunks.

**Individual specimen trees or multistems:**
- Best placed a minimum 2.4m apart if kept shorter
- If growing to 5m tall or more, best planted 5m apart

Choose the right spacing:
The taller you want your trees to grow, the bigger the distance between the trunks needs to be to allow the canopy to develop. However, if you require a short screen you should plant them closer together as keeping your screen very short but widely spaced will create gaps that the branches can’t fill.

---

**Planting trees**

When planting any tree, the maintained/pruned height of the tree must be equal to, or less than, the distance from any building with foundations e.g. a tree that is kept pruned to 5m tall, must be planted at 5m or more away from a building to avoid damaging foundations.

This is the same for Birch trees, Fruit trees, Conifers... **any tree!**
Congratulations!

You should now know which tree you need for your space.

If not, don’t worry, there’s lots of advice on our website www.hardy-eucalyptus.com try using the search filters on the website to narrow down your options, or you can give us a call.

Visit our website to purchase your new addition

Offer code: RootGrow for or a free packet of RootGrow!** To help you and your trees get the best start. Offer ends October 31st 2018

** One 60g packet of RootGrow per order. RRP £2.50. Add product to basket first. Enter code at checkout. Content and photos © Hardy Eucalyptus, Grafton Nursery 2018. All information correct at time of print.
